Stop heating losses!

Grates, stoves and hot air furnaces offer ways of burning fuel money that are so wasteful and so insanitary that it is astonishing anyone in these enlightened days continues to use them. They fill the house with ash-dust, soot, smoke and coalgases and by average do not get out of the coal one-half of its heating value.

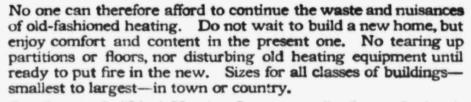

have taught many thousands of building owners in America and Europen how to get better heat and more comfort for far less money than, is brought about by any other heating device.

The cost of IDEAL Boilers and AMERICAN Radiators will annually average the lowest outlay. For instance:—An Ideal-American outfit costing \$200 and lasting 25 years, represents an outlay

of \$8 only a year. As there is no reason why IDEAL Boilers and AMERICAN Radiators will not last as long as the building—say 50 years, the outlay would be \$4 only a year. The saving of a few tons of coal a year, which these outfits effect, will easily pay a handsome yearly profit on this ideal heating outfit—to

say nothing of the other savings, comforts and health protection.

Our free book, "Ideal Heating Investments" tells much that it will pay you well to know. Take the right step today, and tell us kind and size of building you wish to heat.

Every prominent architect and every heating engineer recommend exclusively the IDEAL Boiler and AMERICAN Radiator. They cost no more than inferior apparatus. Accept no substitute.
